SECTION	1 All Projecto					

Data: 40/44/47

#### SECTION 1 - All Projects Project Background

The purpose for the projects along this corridor is to improve the safety of the highway that has higher than average accident rates and provide continuous passing opportunities. Also, the projects will provide additional capacity that will support and improve planned economic development in Butte County. This project is necessary because there are higher than average accident rates and higher accident densities that have been observed along this corridor. A majority of the accidents can be attributed to lack of passing lanes. Anticipated population growth and development along the 70 corridor will increase traffic levels while further degrading the operations and safety along this route.

### Programming Change Requested

The requested change is to move the programming years to line up with SHOPP safety project. The total dollar amount was also reduced due to the change in scope.

#### Reason for Proposed Change

The reason for the change is because of a safety project identified in the project location. It was determined that a cost savings would occur if the projects were developed concurrently to reduce impacts to the traveling public and to produce one cohesive project. Building these projects together reduces the cost to the SHOPP and STIP portions and also eliminates the need to address environmental and R/W impacts multiple times.

If proposed change will delay one or more components, clearly explain 1) reason the delay, 2) cost increase related to the delay, and 3) how cost increase will be funded
