**Appendix 1: Preliminary County Level Updates (08/22/14)**

**Appendix 2: Preliminary Jurisdiction Level Updates (10/14/14)**

## **INTRODUCTION**

Approximately every four years, the Butte County Association of Governments (BCAG) prepares long-term regional growth forecasts of housing, population, and employment for the Butte County area. Once prepared, the forecasts are utilized in developing BCAG's Metropolitan Transportation Plan (MTP), Sustainable Communities Strategy (SCS), Air Quality Conformity Determination, and Regional Housing Needs Plan and provides data support for BCAG's regional Travel Demand Model. Local land use planning agencies may also elect to utilize the forecasts for preparing district plans or city and county long range plans.

As in the past, the forecasts have been developed by BCAG in consultation with its Planning Directors Group which consists of representatives from each of BCAG's local jurisdiction members and the Butte Local Agency Formation Commission. Each of the local jurisdictions provided valuable input regarding the anticipated amount of growth within their respective planning areas.

A low, medium, and high scenario has been developed for each forecast of housing, population, and employment. The use of these scenarios provides for increased flexibility when utilizing the forecast for long-term planning and alleviates some of the uncertainty inherent in long range projections.

The regional growth forecasts will be updated again during the 2018/19 fiscal year in preparation for BCAG's 2020 MTP/SCS and to ensure that any unexpected trends will be integrated into the forecasts.

## **APPROACH**

The growth forecasts presented in this document represent a revision of the 2010-2035 forecasts developed during the 2010/11 fiscal year and utilized in preparing the 2016 MTP/SCS. This revision approach has been taken given the extensive amount of effort put forth by BCAG and the local agencies in developing the 2010-2035 forecasts, the lack of available grant funding to assist with its development, and minimal changes in local land use plans. As revised, the forecasts meet both state and federal transportation planning requirements.

## REGIONAL FORECASTS

In comparison to the regional forecasts prepared by BCAG in 2010, the 2014 forecasts present a similar growth trend with each of the first three projection periods (2020, 2025, and 2030) showing increased population growth over the previous. Between the years 2014 and 2030, the forecasts show a compound annual growth rate (CAGR) of 1.54% for the medium scenario. However, unlike the 2010 forecasts, the 2014 forecasts capture a greater return to the slower growth anticipated statewide for the 10 year period from 2030 to 2040. Between the years 2030 and 2040, the forecasts show a CAGR of 1.11% for the medium scenario.

As previously observed in BCAG's 2006 and 2010 growth forecasts, jurisdictions in the southern portions of the region are projected to absorb a greater percentage of the regional growth than achieved in past growth trends. The cities of Biggs and Gridley are forecasted to, at a minimum, double in population by the year 2040 and the City of Oroville is projected to see between 77% and 109% increases over the next 26 years. While the greatest amount of growth will continue to be occurring in the Chico area with a forecasted range of 13,507 – 19,099 new housing units by the year 2040.

Employment is on track with forecasts prepared in 2010. The 2014 jobs to housing unit ratio met the forecasts of 0.76, an increase from 0.74 year 2010 levels. The rebound is projected to continue with a return to historic long term levels 0.78 jobs per housing unit in 2020 and into the horizon year of 2040.

Notes:

^ Jurisdictional figures reflect anticipated new growth within the anticipated boundaries of each jurisdiction and do not reflect future annexation of existing units or as-yet-unbuilt new units in unincorporated areas to the respective cities. Assumptions about future boundaries are not intended by BCAG to be interpreted as factors limiting such jurisdictions' future boundaries.

^^ Unincorporated Butte County figures exclude forecasted growth identified in the Butte County General Plan 2030 - Environmental Impact Report as Bell Muir/Chico Area, Doe Mill/Honey Run Specific Plan, Thermalito Afterbay, Biggs Area, and Gridley Area and includes shared growth (50%) of Thermalito, Southern Oroville and Eastern Oroville.

California Employment Development Department, Industry Employment & Labor Force - by Annual Average, September 2013 Benchmark, for Butte County (Chico MSA).

## **FORECAST METHODOLOGY**

BCAG has prepared the forecasts using professionally accepted methodologies for long-range forecasting. Utilizing a “top down” approach, long-term projections prepared by the State of California were consulted for Butte County and used to re-establish control totals for the region. Additionally, a variety of data sources, including input from local jurisdiction staff, were reviewed and carried over from the 2010 forecasts and inserted at the local jurisdiction level, therefore incorporating a “bottom up” approach. Forecasts were then allocated into five year increments until the year 2040. Lastly, low, medium, and high scenarios were prepared for each forecasted category.

### **HOUSING**

The latest California Department of Finance (DOF) long range population and housing projections, as of June 2014, were analyzed for the period 2015-2040 for the Butte County region. These projections determine that the Butte County region will grow at a Compound Annual Growth Rate (CAGR) of 1.4%. This information was used to establish the control total for BCAG’s medium forecast scenario.

BCAG then prepared a revise of the 2010 BCAG growth forecasts utilizing 2014 base line data and the long range forecasts from DOF. A “carry-over” of the forecasted growth from the 2010-2035 forecasts to the new 2014-2040 range was applied. An adjustment to the 2035 and 2040 forecast periods was then made to mirror the trend of the DOF forecasts at the Butte County level. Appendix #1 provides details regarding the county level adjustments. The information was then reviewed by local agency planning staff.

A similar approach was then applied at the jurisdiction level, taking into consideration the latest DOF information for each. Once compiled for all jurisdictions, the housing forecasts showed a regional CAGR of 1.37%. This information was used to represent the medium forecast scenario. Appendix #2 provides details regarding the local level adjustments. The information was then reviewed by local agency planning staff.

Based on a 0.2 percent incremental change between the established high and medium scenarios, a low and high housing scenario were developed using a CAGR of 1.17% and 1.57%. This incremental change is identical to that included with the 2010 forecasts.

### **POPULATION**

Population forecasts were prepared by applying average persons per housing unit to the housing unit forecasts. This method allows for the capture of variations in household for each jurisdiction. The average person per housing unit was prepared by dividing the 2014 DOF preliminary population estimates by the preliminary housing estimates for each jurisdiction. This method was applied to all scenarios.

## EMPLOYMENT

Employment forecasts were prepared at the regional/county level only and are based on a ratio of jobs per housing unit.

Baseline 2014 employment data was obtained from the California Employment Development Department (EDD) for the year 2013 – an annual average for 2014 was not available at the time the BCAG regional forecasts were prepared. The 2013 EDD data provide a total of all non-farm jobs for the region. This information was then used in conjunction with 2014 DOF preliminary housing unit estimates to calculate a ratio of 0.76 jobs per housing unit.

In 2010, historic employment information was obtained from the EDD for the period 1990-2009 and averaged to calculate a long range jobs to housing unit ratio of 0.78. This information was updated to include 2013 data and the ratio of 0.78 was unchanged. The ratio was applied to the years 2020-2040 based on the anticipated continued recovery of employment rates and the long term historical average.

Lastly, the jobs to housing unit ratio developed for each 5 year period was applied to all scenarios.
